COLLABORATION SPACES ARE CHANGING, AND

AV TECHNOLOGY

IS EVOLVING WITH THEM.

Collaboration spaces have changed from traditional in-person office environments to flexible hybrid ecosystems. Early workplaces relied on face-to-face meetings, later shifting toward open-plan and co-working spaces.

From auto-framing and audio processing to wireless sharing and cloud-based management, today's systems are designed for hybrid environments and platform flexibility. And when your project requires innovative collaboration technology, we're here to connect you with leading AV solutions that are engineered with modern users in mind.

Accessible Design

Many modern meetings are designed to function in a hybrid manner, and it's essential to ensure that the technology provides a positive collaboration experience for in-person and remote participants.

Multi-Purpose Rooms

With the rise in multi-functional collaboration spaces, we're saying goodbye to fixed layouts. From educational environments to huddle spaces, multi-purpose rooms require a versatile, user-friendly audio-visual ecosystem that adapts to collaborators' needs.

Seamless Connectivity

With features like plug-and-play and efficient content sharing, user-focused design ensures that meeting participants can get right to work — no troubleshooting necessary.

Collaboration is evolving,
and we'll ensure that you stay
ahead of the curve.

PROGRAMMING SERVICES

FOR INTEGRATION AND TECHNOLOGY TEAMS

Think of us as your backstage crew, making the magic happen while you take center stage. Our programming services allow you to instantly scale your capacity, reduce onsite labor, and minimize project risk and timeline delays — all while partnering with programmers who understand the way you work.

Included Services

Control Code Development • Touch Panel Interface Development • DSP Configuration Development Basic Remote System Configuration • Remote Support Services (On Request)

Commissioning Engagement Models

LinkLab-Led: Best for shop testing, complex systems, and reduced onsite training, LinkLab leads the commissioning process end to end with issue resolution and system performance validation.

Support-Only: Ideal for integrators retaining full onsite control, support-only commissioning provides reactive, offline support for collaborative troubleshooting.

CONNECT WITH US TO GET STARTED

DIGITAL SIGNAGE CONTENT MANAGEMENT MADE SIMPLE

Meet Autora DSM, your smart solution for seamlessly managing digital signage content and keeping displays engaging.

User-Friendly Platform:

Navigate the intuitive, user-friendly platform with ease.

Operation Efficiency:

Offers seamless plug-and-play functionality, perfectly suited for both indoor and outdoor signage requirements.

Brand Awareness:

Effectively connect with target audiences through dynamic, on-brand creative content.

EXPERIENCE THE POWER OF AUTORA DSM

WHY

COLLABORATION

PROJECTS

SUCCEED

(OR FAIL)

FROM CREATING A USER-FRIENDLY TECHNOLOGY ECOSYSTEM...

... to ensuring seamless product support and maintenance, cohesive audio-visual solutions are the key to effective collaboration.

COLLABORATION PROJECTS SUCCEED...

... when they are designed around the end-user experience and supported by clear organizational alignment, not just driven by technology. Success starts in the initial consultation by understanding the client's goals, how the space will be used, room layout, and number of participants. That context drives proper system design so the technology fits the environment instead of forcing users to adapt.

Seamless User Experience
Productive collaboration environments prioritize functional, user-friendly solutions that accommodate in-person and remote participants without any hassle.

Efficient Connectivity
Intuitive technology enhances the collaboration experience, including easy access to connectivity and plug-and-play solutions.

Cohesive Technology Ecosystem
When facilitating seamless user collaboration, providing consistent experiences across all rooms reduces confusion and supports needs.

Maintenance and Support
Minimize downtime and delays by providing users with comprehensive training and product support when maintenance is required.

COLLABORATION TECHNOLOGY PROMOTES SEAMLESS COMMUNICATION IN MANY APPLICATIONS.

- Huddle Spaces
- Conference and Meeting Rooms
- Higher Education
- Flexible and Multi-Purpose Environments

MEET THE DEMANDS OF MODERN WORKSPACES

WITH THE AVOCOR H SERIES

When you need to deploy clean, consistent, and supportable collaboration spaces at scale, the Avocor H Series is the key to success. Delivering PCAP precision touch with optically bonded glass, single-cable 100W USB-C BYOD, video-bar-ready monitor mode, and cloud fleet management, the series is purpose-built for modern UC rooms.

Precise Touch and Low Latency

PCAP technology with optically bonded, zero-parallax glass delivers precise inking and low latency.

One-Cable Rooms for Less Risk

100W USB-C delivers power, video, audio, and touch over a single connection — backed by full integrator I/O for clean, standardized installs.

Deploy Once, Manage Everywhere

FUSE cloud management + UiQ interface control enable consistent room builds, remote updates, and fewer truck rolls.

EXPLORE THE VERSATILE SOLUTION FOR MODERN CORPORATE CHALLENGES

EMPOWER MICROSOFT TEAMS ROOMS WITH INTELLIGENCE AND SIMPLICITY

With MAXHUB, every solution is crafted for seamless integration and superior performance. Designed for flexibility and scalability, the MAXHUB MTR portfolio transforms any space into a certified Teams Room with ease and consistency.

Microsoft Teams Rooms XBars Series

Deploy Your Way — Windows, Android, or USB
Ensures secure deployment, seamless third-party compatibility, and enhanced IT management for diverse collaboration needs.

XBoard for Microsoft Teams Rooms

All-In-One Simplicity. The first Teams-certified interactive display with Trident Lens system and Windows 11 IoT.

Universal Console for Microsoft Teams Rooms

Smooth, Focused, and Efficient Collaboration
Allows users join meetings, invite participants, control during meetings and share content without leaving their seats.

Secure, Scalable, and Connected

With MAXHUB Pivot for remote device management, transform ordinary spaces into hubs of collaboration and innovation — backed by a 3-year warranty with local support.

DISCOVER THE COMPLETE MAXHUB SOLUTION FOR MICROSOFT TEAMS ROOMS

KEY

COMPONENTS OF A COMPLETE COLLABORATION SYSTEM

Collaboration projects succeed when the AV ecosystem is simple, consistent, and designed for how people actually work. The perfect balance between process and technology is best achieved through a complete collaboration system.

Compute (Brain)
Teams Rooms, Zoom Rooms, or Webex device running the meeting.

Audio
Mics, DSP, speakers, echo cancellation, and noise reduction — the most critical components.

Video
Fixed or PTZ cameras, auto-framing, and speaker-tracking capabilities.

Control Layer
Touch panels, room schedulers, one-touch join, or Bring-Your-Own-Device connectivity.

Content Sharing
Wireless sharing, HDMI ingest, or whiteboarding tools.

Network + Management
PoE switching, VLANS, and cloud device management.

At its core, a complete collaboration system should prioritize high-quality audio and ease of use. Without these components, users may experience technical difficulties — even if the rest of the ecosystem is high-end.

MICROSOFT TEAMS ROOMS

THE FOUNDATION OF MODERN COLLABORATION

Intended for every space and size, Microsoft Teams Rooms (MTR) allows users to step into the world of intelligent collaboration. Microsoft Teams Rooms provides a standardized, scalable foundation for collaboration across organizations. By building on the familiar Microsoft Teams ecosystem, it delivers a consistent experience that reduces friction for end users and simplifies deployment at scale for IT and AV teams.

The platform encourages closer connections and engaging conversations among in-person and remote participants through three major benefits — inclusive features, intelligent capabilities, and flexible design.

Inclusive

Microsoft Whiteboard makes collaboration easier than ever before. Meeting participants can share their ideas and contribute to the conversation on a digital canvas through touch screens and companion devices. And with wireless content sharing through Microsoft PowerPoint Live and Excel Live, in-person attendees can lead meetings with ease.

Intelligent

In today's boardrooms and huddle spaces, intelligent capabilities are paramount. IntelliFrame provides an optimal visual experience and automatic camera switching while speaker recognition identifies each voice and person in the meeting. AI-powered capabilities such as Microsoft Copilot enhance productivity by assisting with scheduling, agenda creation, note-taking, action items, and follow-ups.

Flexible

When choosing AV solutions for a multi-purpose space, it's important to select an operating system that works for everyone. Microsoft Team Rooms offers an intuitive experience for Windows or integrated Android devices. From an operational standpoint, the platform also streamlines room and device management, making it easier for IT teams to monitor, support, and maintain systems across multiple locations.

As a fundamental piece of modern meetings, Microsoft Teams Rooms facilitates participation and collaboration — so everyone is seen, heard, and included.

EMPOWER MEETING ROOMS
WITH TECHNOLOGY THAT'S BUILT FOR YOU

As a Microsoft Teams Room component, ClickShare Hub works seamlessly with certified devices such as video bars, cameras, and speakers — ensuring effortless setup for IT teams and smooth, high-quality collaboration for participants.

WITH COLLABORATION SOLUTIONS, EQUITABLE MEETINGS ARE MORE THAN POSSIBLE

— THEY'RE THE NEW STANDARD.

Microsoft Teams Rooms and other collaboration solutions foster an inclusive environment for participants by ensuring that every participant receives a positive meeting experience. These systems are built for hybrid work, bringing high-quality audio and video to in-person and remote users.

WHERE ARE MTR AND COLLABORATION SOLUTIONS USED?

Hybrid internal meetings:
From team syncs to cross-office teamwork, collaboration solutions create an equitable work environment for everyone.

External meetings:
Whether connecting with clients in vendor meetings and presentations or leading sales calls, a complete AV system strengthens relationships through collaboration.

Executive rooms:
Enhance board meetings, QBRs, and high-stakes discussions with future-forward technology, so no one misses a thing.

Huddle rooms:
Combine ease of use and efficient functionality for quick meetings of 2-6 people.

Training and enablement:
Ensure that in-person and remote users are properly informed with high-quality onboarding, demos, and remote learning sessions.

Specialized spaces:
Meeting equity isn't just for the boardroom — from healthcare and support centers to education and public sector environments, collaboration solutions are revolutionizing the way teams can work together.

When a complete collaboration system works, everyone feels equally present.

STUNNING PERFORMANCE, UNLIMITED POSSIBILITIES

MAKE A BIG VISUAL IMPACT WITH SAMSUNG

WE PROUDLY DRIVE PROGRESS THROUGH PARTNERSHIP.

DELIVER YOUR MESSAGE WITH SUPERB PICTURE QUALITY

When you need to inform, entertain or engage an audience, the PN-E Series delivers your message with technology you can trust. With a brilliant 4K UHD panel and simplified controls, the Sharp PN-E Series enhances workplace collaboration with eye-catching digital signage and dynamic information sharing to make an impact.

THE ESSENTIALS

Sleek Design
The PN-E Series fits more screen into less space for a slim, streamlined design. And with a low-profile and uniform bezels on all sides of the display, users can focus on what matters most — your content.

USB-C Compatibility
Along with an HDMI input, the PN-E Series supports audio and video from a single USB-C connection for hassle-free, instant content sharing.

Clear Visuals (In Any Lighting)
Engineered with a high haze, anti-glare panel, Sharp ensures that your message is clear and visible at all times.

In a fast-changing business environment, technology should be one thing you can count on. Built on efficiency, productivity, and trust, Sharp is here to simplify workflows and enhance collaboration.

BUILDING BETTER COLLABORATION SPACES WITH CONFIDENCE

By combining user-focused products and versatile design, seamless collaboration spaces foster innovative ideas and inclusive communication among participants. We're here to help you confidently expand your business opportunities in collaboration environments, and ensure that you're selecting the right system every time.

When you balance people, process, and technology, your collaboration projects are built for success — and it all begins with the AV system.

HOW THE RIGHT PRODUCTS INCREASE EFFICIENCY AND EASE OF USE

The right technology can make the difference between an efficient user experience and one filled with delays and troubleshooting. Projects can fail when they prioritize hardware over user needs or introduce overly complex, inconsistent systems that frustrate meeting participants.

The key to effective collaboration is a simple, intuitive workflow that makes hybrid collaboration easy, straightforward, and reliable. High-quality audio and video tailored to the room size and participant count is essential.

Proper Camera Coverage

Ensure that remote attendees have a front row seat in every meeting with intelligent camera coverage in the room.

Clear Microphone Pickup

Prevent frustration and incomplete conversations between in-person and remote speakers with crystal-clear audio.

Balanced In-Room Sound

Provide an equitable audio experience with balanced in-room sound, no matter where participants are seated.

MAXIMIZE EVERY MEETING SPACE

Say goodbye to complex meeting setups with videoconferencing solutions that make the most of every room. With 180° panoramic coverage and AI-powered audio, Jabra's PanaCast 40 VBS and PanaCast 50 VBS are certified for Microsoft Teams and built on MDEP.

PanaCast 40 VBS

Small Rooms, Big Ideas.

Transform even the smallest of meeting rooms into spaces where productivity and collaboration thrive.

PanaCast 50 VBS

One Bar, Flexible Setup Options.

No matter your setup, the PanaCast 50 VBS delivers a versatile, cost-conscious solutions to elevate the videoconferencing experience.

TAKE ADVANTAGE OF JABRA'S EXPRESS INSTALL FOR MICROSOFT TEAMS ROOMS
